

Corner section of industrial packaged boiler house

## Packaged Boiler Houses & Plant Rooms

### Designed and manufactured to your specifications

F3's range of fully Packaged Boiler Houses and Plant Rooms are manufactured from modular insulated panels and therefore can be produced to any size requirement. The fully packaged rooms are transported to the site with all plant pre-fitted and wired ready for site connection and commissioning. On site labour time is kept to an absolute minimum and damage by other trades is eliminated. The units can be operational within hours of the delivery. The perfect solution as the roof top plant room can be craned into position and connected to site pipe and wiring.

Our plant rooms are designed by qualified structural and mechanical engineers to utilise space and minimise on site installation time. Materials, colours and equipment specifications are offered in line with client requirements.
